delivering engineering excellence

one of the UK's leading providers of building services engineering

We deliver all aspects of building services solutions that bring lasting change for our clients. Change comes from robust project management and at Integral Building Services Engineering all our work is underpinned by engineering excellence. It is this that sets us apart and forms the cornerstone of the wider **Integral** Group success.

Why **Integral** building services engineering?

The most successful and well-respected building services company in the UK and in our chosen market sectors through.

Whether as Principle Contractor or Sub-Contractor we work in a friendly, efficient and committed manner. These are our values and they reflect how we work and behave.

We also make sure we understand what is important to you and solutions which meet your needs and add value to your organisation, your staff and your customers.

It matters to us how each project is delivered. That's why our directors are hands-on; our people work hard to make every project an enjoyable experience and our craftsmen take great pride in their high quality workmanship.

What makes us different?

Part of what makes us different is the degree to which we involve our clients' and their feedback to structure the way we learn, grow and develop. Taking the lessons learned on our future projects.

We enjoy close working relationships with all our clients, consultants and contractors. Understanding the broader picture allows us to respect the contribution of everybody we collaborate with. All our projects are based on self-delivery and we employ the best engineers, technicians, and project managers. This ensures the highest quality of standards, and our strategic partnership teams ensure a single point of administration which optimises our responsiveness and reliability, making us trusted advisors to our clients.

Delivering projects on time, on budget and on brief is vital. However Integral Building Services go further. We recognise no two projects are the same and we tailor our support to match our client's requirements to achieve the most cost effective and sustainable solution every time. We do this using our one team approach. This is been designed to mirror the BSRIA guidelines on ensuring best practice to achieve 'soft landings'. Combined with our in-house engineers using the best technology in BIM guarantees the full resource of Integral is behind very challenge we face.

We're not afraid to question the norm and we use the feedback our customers give us to implement changes that are designed to improve the service we offer.

Our one team approach

Our one team approach has been designed to mirror the BSRIA guidelines on ensuring best practice to achieve 'softlandings', and ensures the full resource of Integral is behind every challenge we face.

We remain at the forefront of technology with the latest innovations and tools utilised in the development of our designs. 3D design has been implemented within the business now with the full Autodesk Revit MEP Suite installed in 2011.

The use of the latest software, Autodesk Revit MEP Suite, IES VE and Hevacomp, supports our services offer including the active development of BIM projects.

We understand our activities on and off site have an impact on the environments in which we operate. We work closely with our employees, customers and supply chain to ensure all parties are fully aware of their social responsibilities and minimise the impact of our environmental activities.
